

MFG/PRO Information Right To Your Desktop

PRO_forms is the MFG/PRO forms tool that enables your company rapid, convenient access to the information needed to keep operations running smoothly.

PRO_forms allows critical business data from MFG/PRO to work with your Excel spreadsheet application. Once in Excel format, the data can be viewed, analyzed, printed, or processed further – all on your timetable – without becoming deluged by an endless stream of paper.

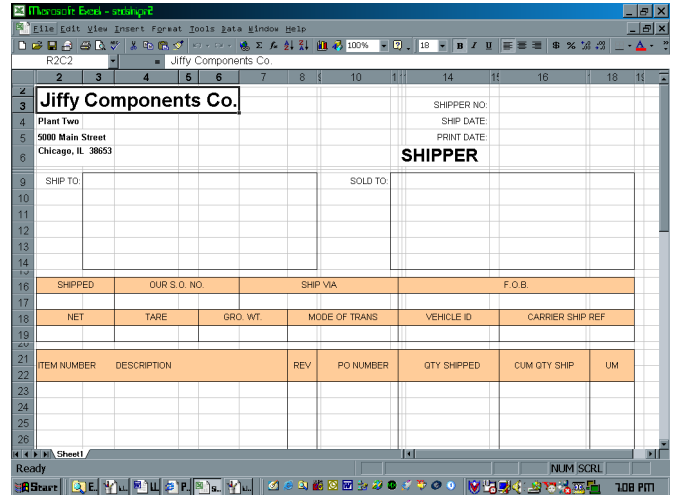

PRO_forms captures all the necessary data from your MFG/PRO database to populate an Excel spreadsheet. The data is then presented to users precisely to their specifications.

By tapping into Excel for your MFG/PRO forms needs, your firm can leverage existing Excel spreadsheet applications and the resources within your organization that can work with Excel. When using PRO_forms, there is no need to learn an entirely new forms package.

With PRO_forms, the need to purchase pre-printed forms can be eliminated. PRO_forms can provide rapid payback through the cost savings in printing fees alone.

As your information requirements change, the Excel spreadsheets can be modified to meet the need – either with in-house resources or with the assistance of WPA.

PRO_forms does not require a separate server, or redundant databases – all the information you need is captured directly from your MFG/PRO database. This significantly lowers the costs associated with managing your enterprise information library.

A Version to Fit Your Company
